Owl Compute · Q2 2026 Training Schedule

Confidential — Internal Distribution Only

Field	Value
Prepared by	Operations Planning
Owner	Sarah Chen — <code>sarah.chen@owlcompute.example</code>
Document version	v1.3
Approved by	Site Reliability + Capacity Planning
Approval date	2026-04-22

Approved Training Run

Field	Value
Model	Falcon-VL-72B retrain
Window	May 15 – May 22, 2026
Daily duty window	14:00 – 22:00 ET
Expected peak delta	+70 MW
Confidence	High (~88%)
CI band	±10 MW
Repeat pattern	Daily through window
Workload class	Training (large-batch)
Reference run	Q4 2025 retrain (similar utilization profile)

Notes

- Coordinated with site ops; HVAC envelope confirmed for sustained 14:00–22:00 daily peak through the full 8-day window.
- Backup-gen and BESS posture unchanged for the duration. **No flexibility commitments are offered for this window** — the run is throughput-bound and shifting it costs more than the curtailment credit.
- Window concludes 2026-05-22 02:00 UTC (= 22:00 ET on May 21 / 02:00 ET May 22).
- This calendar supersedes the v1.2 placeholder window in the Q2 schedule.

Disclosure decision

Per Owl Compute's Q2 disclosure policy, this calendar is being shared with Dominion Energy via Grid Passport's signed-disclosure path.

What crosses the boundary:

- Window (start, end)
- Expected delta MW
- Confidence interval ($CI \pm$)

What stays sealed on Owl infrastructure:

- Workload type (training vs. inference)
- Daily duty cycle (8 hr/day)
- Repeat pattern (daily through window)
- Source document hash + filename

This document stays on Owl Compute infrastructure. Only the structured fact (window + delta MW + CI band) is signed and transmitted to Dominion. Original PDF is hashed locally; the hash is the only reference that crosses.
